Sail Tracks

"Sail Tracks" is in development!

The goal is to provide for the Race Committee an easy (or easier) method of keeping track of where boats are during the race sequence.

Right now, you must enter your own boats. The data you enter stays with the device AND the browser that you used to initiate the application.

Eventually, boat data will be able to be configured and downloaded to you from an established account located on Racing LSC .

The app uses "IndexedDB" which is a browser database (Non-SQL) JSON datastore.

You can see it when the app is active by pressing F12 (Developer). For Chrome, it can be found listed under Application.

Play if you want. 😊

Call with questions or ideas as well.

I will add stuff as appropriate to the help menu item as I go along.

Cheers!

Steve
